Portfolio Project – Ajshe Nuredini

1. Project Overview

The goal of this project was to create a **personal portfolio website** that demonstrates modern web design skills, responsive layout, and interactive features. The portfolio showcases:

- Personal introduction and “About Me” section
- Skills visualization
- Projects showcase
- Media section with embedded video
- Contact section with location, email, phone, and form
- Dark mode toggle and interactive buttons

The website was built using **HTML, CSS, and JavaScript**, with a focus on **responsive design** and **user experience**.

2. Project Structure

The folder structure of the project is organized logically for maintainability:

```
MyPortfolio/
│
├─ index.html      → Main HTML file
├─ style.css       → Styles for layout, colors, fonts, responsiveness
├─ script.js       → JavaScript for interactivity (buttons, toggles, animations)
└─ images/         → Folder containing profile photo and other images
```

- Keeping images in a separate folder ensures paths are simple and avoids conflicts.
- CSS and JS are kept in separate files for clarity and modularity.

3. HTML Structure

The index.html file is divided into semantic sections:

3.1 Header (Hero Section)

- Displays a welcoming message and profile picture.
- Includes a **typing animation** for dynamic introduction ().
- Contains a button Explore More that scrolls the user to the **About** section.

```
<header class="hero">
<div class="hero-content">
<div class="hero-text">
```

```
<h1><span id="typing"></span></h1>
<p>Future Computer Engineer building modern and creative web experiences.</p>
<button onclick="scrollToSection('about')">Explore More</button>
</div>
<div class="hero-image">
<img src="images/profile.jpg" alt="Profile Photo">
</div>
</div>
</header>
```

3.2 Navigation Bar

- Provides links to each section of the portfolio (About, Skills, Projects, Media, Contact).
- Includes a **dark mode toggle button**.

```
<nav class="navbar">
  <a href="#about">About</a>
  <a href="#skills">Skills</a>
  <a href="#projects">Projects</a>
  <a href="#media">Media</a>
  <a href="#contact">Contact</a>
  <button id="darkToggle">🌙</button>
</nav>
```

3.3 About Section

- Introduces the developer (you) and describes goals and learning journey.
- Includes a **“Read More” button** that shows extra text when clicked.

```
<section id="about" class="fade-in">
  <h2>About Me</h2>
  <p>Hello! I'm Ajshe...</p>
  <button onclick="toggleMore()">Read More</button>
  <p id="moreText" class="hidden">I am constantly learning new technologies...</p>
</section>
```

- **Explanation:** This section introduces you, engages visitors, and encourages exploration of more details. The toggle feature keeps the design clean.

3.4 Skills Section

- Shows skills using **interactive progress bars**.
- Each skill has a title, visual bar, and description.

```
<div class="skill fade-in" onclick="toggleSkill(this, '80%')">
  <div class="skill-title">HTML</div>
  <div class="skill-bar"><div class="skill-fill"></div></div>
  <div class="skill-info">Strong understanding of HTML</div>
</div>
```

- **Explanation:** Visual representation of skills gives immediate feedback to visitors. Clicking can animate the skill bar dynamically.

3.5 Projects Section

- Cards display personal projects with a title and description.

```
<section id="projects" class="fade-in">
  <h2>Projects</h2>
  <div class="card"><h3>Portfolio Website</h3><p>My personal website...</p></div>
  <div class="card"><h3>Calculator App</h3><p>A simple but functional calculator.</p></div>
</section>
```

- **Explanation:** Cards are a clean way to show multiple projects in a structured layout.

3.6 Media Section

- Embedded YouTube video demonstrates learning process.
- Video visibility is toggled via button to reduce clutter.

```
<section id="media" class="fade-in">
  <h2>Media</h2>
  <button onclick="toggleVideo()">Show Video</button>
  <div id="videoContainer" class="hidden">
    <iframe width="560" height="315"
src="https://www.youtube.com/embed/FQdaUv95mR8?si=tawU5HmUoMEqqoI8"
title="YouTube video player" frameborder="0" allow="accelerometer; autoplay; clipboard-
write; encrypted-media; gyroscope; picture-in-picture; web-share" referrerpolicy="strict-origin-
when-cross-origin" allowfullscreen></iframe>
  </div>
</section>
```

- **Explanation:** Lazy-loading the video prevents slow page load and keeps the layout neat.

3.7 Contact Section

- Includes email, location, phone, and a **contact form**.
- Map iframe can be toggled for better UX.

```
<section id="contact" class="fade-in">
  <div class="contact-info">
    <p>📧 Email: <a
href="mailto:nuredinigroup@gmail.com">nuredinigroup@gmail.com</a></p>
    <p>📍 Location: Skopje</p>
    <p>📞 Phone: +389 75 403 432</p>
  </div>
  <button onclick="toggleMap()">Show Location</button>
  <div id="mapContainer" class="hidden">
    <iframe src="https://www.google.com/maps?q=Skopje&output=embed" width="100%"
height="300" style="border:0;"></iframe>
  </div>
</section>
```

- **Explanation:** Provides multiple ways for visitors to contact you. Toggling map keeps the interface clean.

3.8 Footer

- Simple copyright statement.

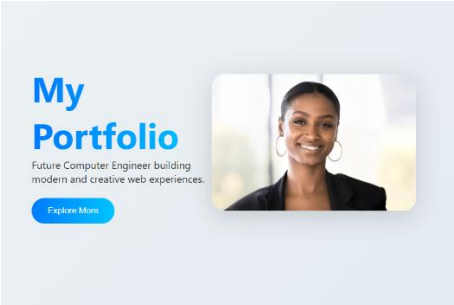
```
<footer>
  <p>© 2025 Ajshe Nuredini</p>
</footer>
```

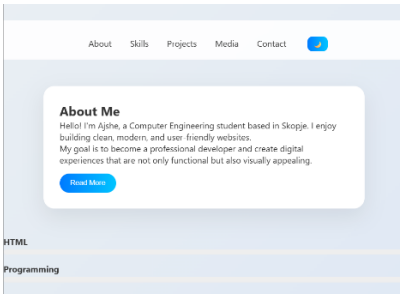
4. Interactivity (JavaScript)

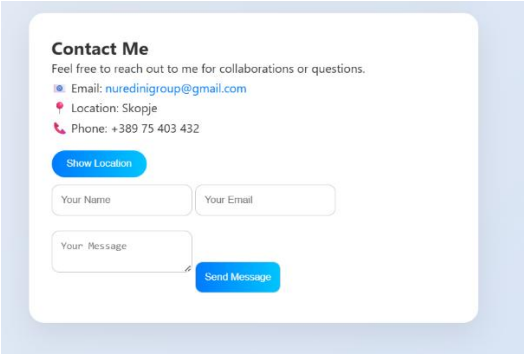
- **toggleMore()** → Shows extra text in About section.
- **toggleSkill()** → Animates skill bars.
- **toggleVideo()** → Shows or hides the embedded video.
- **toggleMap()** → Shows or hides the Google Maps iframe.
- **Dark Mode Toggle** → Switches website colors for light/dark mode.
- **Logical explanation:** Interactivity improves user experience and makes the portfolio dynamic.

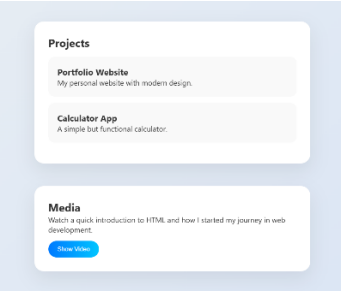
5. Styling (CSS)

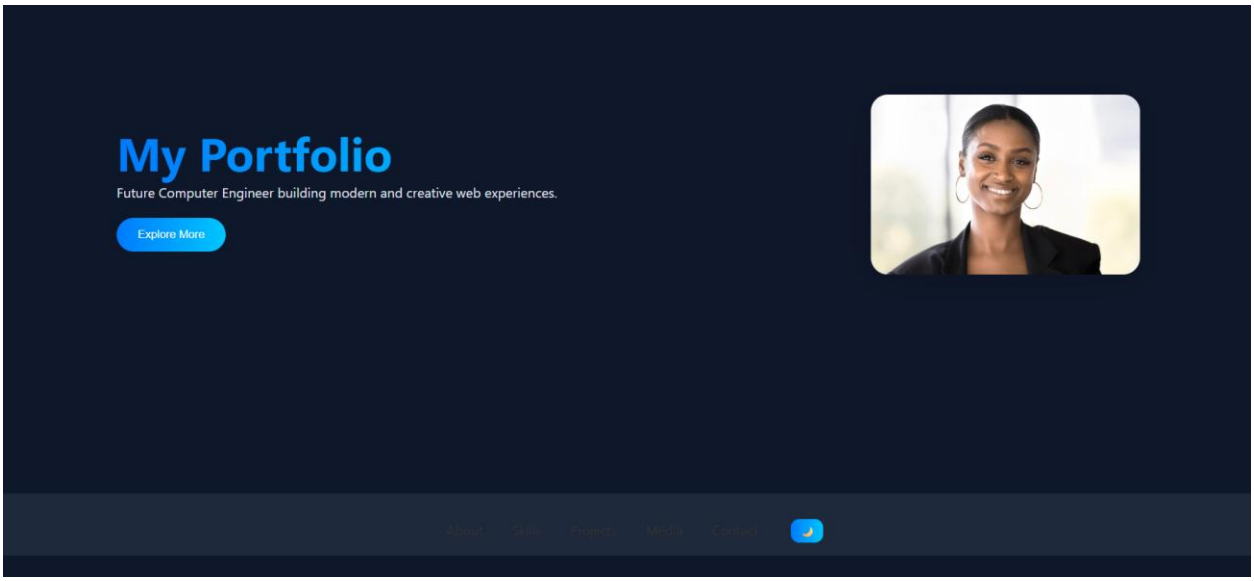
- Responsive layout for mobile and desktop.
- Smooth transitions and animations for fade-ins, progress bars, and buttons.
- Consistent colors, typography, and spacing.
- **Logical explanation:** CSS ensures the website is visually appealing, user-friendly, and consistent with modern web design standards.

Portfolio Summary :










This portfolio was created to showcase my skills, projects, and personal brand as an aspiring computer engineer. It uses semantic HTML for clear structure, CSS for responsive and modern design, and JavaScript for interactive features like skill bars, “Read More” toggles, video embedding, and dark mode. The project is organized logically with separate folders for assets, tested locally with VS Code Live Server, and deployed on GitHub Pages to ensure full functionality and accessibility. Every design and interactive choice was made to provide a smooth, engaging, and user-friendly experience.
